 - Glass
 - Hair
 - Paints/Polymers
 - Physical Match
 - Poisons
 - Other / Miscellaneous

***Not all services listed above are provided by all laboratories**

¹ These requests do not require an officer's report; all other requests need an officer's report at the time of submission.
² If an officer's report is available, it should be included at the time of submission.

Because laws and legal precedents concerning the collection of physical evidence are subject to change, it is impossible to give specific up-to-date information on acceptable procedures. It is, however, of utmost importance that great care be taken to use only approved methods when obtaining evidence of any kind. Therefore, it is imperative that during an investigation a close liaison is maintained between the District Attorney's Office, the Oregon State Police Forensic Laboratory and those persons responsible for the collection of physical evidence.

Should you have any questions please call your local laboratory for assistance.

Agencies who are members of our Laboratory Online Information System (LOIS) will be able to retrieve information and reports about cases submitted for analysis from our secure web site.

The Forensic Services Division's Physical Evidence Manual is located at:

<https://tinyurl.com/OSP-Forensic-Documents>

CASE RESTRICTION

A request that is not marked with one of the following restrictions will be released to the requesting agency and the prosecuting attorney's office.

- Investigating Officer – Any report(s) under this case will only be made available to the Investigating Officer. It will be the officer's responsibility to distribute the report(s). A clearly written E-mail address on this form is required for this level of restriction.
- Agency – Any report(s) under this case will only be made available to members of the requesting agency. It will be the agency's responsibility to distribute the report(s) related to this case.
- Lab Staff – The restriction of the Lab Staff will be at the discretion of the laboratory. When selected and if approved, only a few selected personnel will be able to access the results of this case.

Firearms

All firearms must be rendered safe and labeled as safe when they are submitted to the laboratory.

*** SHARPS ***

Sharp objects that are submitted for analysis must be packaged in such a manner as to protect personnel during handling. The packaging should be protective enough to reduce the possibility of injury or puncture. Commercially manufactured puncture-resistant ("sharps") containers are available for purchase. Contact your local laboratory for information.

*** BIOHAZARDS ***

Any suspected biological fluids, items removed from a body orifice and syringe contents should be labeled with a "BIOHAZARD" label.
